DelftBlue access

Alok Bharadwaj posted on 28 April, 2026 12:13 Edited

Dear students,

Most (or all) of you now must have access to DelftBlue supercomputer. Before the next class, can you all try to login yourself? If you have trouble login in we can discuss it on Thursday.

Here are the steps to do it.

1. Navigate to <https://login.delftblue.tudelft.nl>
(There are some issues logging in through Microsoft Edge. It works on Google Chrome, Brave and Safari)
2. If you login for the first time, you may see a message saying Home directory not found. Click on "Open Shell" and it will take you to a login page. Steps 2-5 are only for the first time you are logging in. For regular process, go to Step 6 directly.

Home directory not found

Your home directory could not be found. It may be temporarily unavailable, or it may still need to be created.

If this is the first time that you use this system, you can trigger the creation of your home directory through a one-liner. (In the shell window, type 'logout' to terminate the shell. Then close the shell window and reload the webportal.)

[Reload Webportal](#)

3. Login through your netid password. You will not see anything change on the screen when you type your password. This is normal for terminal access.

```
Host: login.delftblue.tudelft.nl

Could not create directory '/home/netid/.ssh'.
Failed to add the host to the list of known hosts (/home/netid/.ssh/known_hosts).
netid@login.delftblue.tudelft.nl's password: 
```

4. After logging in, you will be taken to your login node on DelftBlue

```
Host: login.delftblue.tudelft.nl

Could not create directory '/home/ / .ssh'.
Failed to add the host to the list of known hosts (/home/ / .ssh/known_hosts).
@login.delftblue.tudelft.nl's password:

DelftBlue

For information about using DelftBlue, see the documentation: https://doc.dhpc.tudelft.nl/delftblue/
When you have questions, you can interact with the DelftBlue community: https://mattermost.tudelft.nl/dhpc/ (log in using your TU

Runtime
-----
Some nodes are dedicated to jobs with a runtime shorter than 4 hours or 1 day, to decrease the waiting time for those jobs.
Request a realistic (or smart) runtime for your jobs to benefit from this. Use the gpu-a100-small partition for reduced waiting

Storage
-----
Files on /scratch that have not been modified for more than 6 months are automatically removed. Files on /scratch are not backed
Please check your files and (re)move what you no longer need on DelftBlue. Install software in your /home folder.

Creating ECDSA key for ssh

diskquota      ||
location      || id || used | size | hard || chunk files
-----||-----||-----||-----||-----||-----
/scratch      || 1 || 0 Byte | 5.00 TiB | 5.00 TiB || 0 | 1000000
/home         || 2 || 384.02 MiB | 30.00 GiB | 30.00 GiB || 8 | 1000000

10:35:03 up 32 days, 22:54, 19 users, load average: 0.56, 1.04, 1.56
netid@login01 ~]$
```

5. Type logout to close the session.

6. Go back to the Web-portal. Reload the web-portal. You will then see something like this.

7. Click Delft Blue cluster shell access. It will once again take you to the terminal

```

Host: login.delftblue.tudelft.nl
Themes: Default

DelftBlue

Runtime
Some nodes are dedicated to jobs with a runtime shorter than 4 hours or 1 day, to decrease the waiting time for those jobs.
Request a realistic (or smart) runtime for your jobs to benefit from this. Use the gpu-a100-small partition for reduced waiting times for small GPU jobs.

Storage
Files on /scratch that have not been modified for more than 6 months are automatically removed. Files on /scratch are not backed up!
Please check your files and (re)move what you no longer need on DelftBlue. Install software in your /home folder.

Last login: Thu Apr 23 11:19:07 2026 from 131.180.67.14

  diskquota  || size || chunk  files
  location  || id   || used  || hard  || used  || hard
-----
/scratch   || 1    || 0 Byte|| 5.00 TiB|| 0      || 1000000
/home      || 2    || 12.47 GiB|| 30.00 GiB|| 80590  || 1000000

11:42:01 up 32 days, 2 min, 30 users, load average: 1.41, 2.49, 2.58
[ajakobi@login02 ~]$

```

8. Type: `source /projects/nb4170/setup_nb4170.sh` This will activate the environment and you will see (ai4bio) next to your username
9. Go back to the Web-portal. Select Interactive Apps -> Jupyter Lab. Choose the following settings and click Launch. For the purpose of testing, set the **Runtime to 0** (this will give 15 minutes of access) and your job will not hold resources unnecessarily for other users of DelftBlue.

Allocations and Settings

Email me when the job starts
Send an email notification when the job starts.

Account
education-as-courses-nb4170

Partition
compute-g1
Select the partition to be charged for this session. If you want to use a GPU use the **visual** or the **gpu-a100-small** partition.

Runtime [h]
3
Maximum runtime for the job in hours. If you select 0, the runtime will be set to 15 minutes for testing purposes.

Number of nodes
1
Number of compute nodes to allocate.

Number of tasks
1
Number of tasks per node.

Number of CPUs per task
2
Number of CPUs to allocate for each task. Only even number are allowed.

Number of GPUs (optional)
0
Number of GPUs per node. Don't forget to load the cuda module in the **additional modules** field and to select a partition with GPUs. For the **visual** partition the number of GPU's steps of 4096 and **cuda** is loaded by default.

Memory per CPU [GB]
2
Amount of memory per CPU in gigabytes (--mem-per-cpu).

Additional modules (optional)
miniforge3
Space separated list of additional modules to load.

Container file
/projects/OnDemand/apptainer/jupyter/pytorch2.2.1-cuda12.1.sif
Select a container file from the dropdown menu. You can place your own customized containers under **~/ondemand/jupyter/**. To learn more about the provided containers please visit the [EWI GitLab repository](#).

Container file
/projects/OnDemand/apptainer/jupyter/pytorch2.2.1-cuda12.1.sif
Select a container file from the dropdown menu. You can place your own customized containers under **~/ondemand/jupyter/**. To learn more about the provided containers please visit the [EWI GitLab repository](#).

Launch

10. After a few minutes of waiting time (Most jobs takes about 5 minutes to wait in the queue. Runtime greater than 4 hours will lead to much longer waiting time, so try to avoid it. Once you are through the queue you will see a screen like this. Click Connect to Jupyter and your notebook is ready!
